

This hand-moulded facing brick is made from loess, which is extracted among others from the Kesselt plateau in the Maas valley (Belgium) and then enhanced with raw materials from the Volcanic Eifel.

ASPECT AND STRUCTURE

The (non-perforated) facing brick is sanded on five sides. The structure looks rugged with fine and irregular grooves in the sandy surface. The firing process takes place in a gas-heated tunnel kiln. DUBIO exists in 2 variants: DUBIO 1 = DUBIO with 1 shadow joint on the stretcher face (asymmetrical shadow joint) and DUBIO 2 = DUBIO with 2 shadow joints on the stretcher face (double symmetric shadow joint). The line pattern continues on at least one header face of the brick. The thickness of the shadow joint is ± 4 mm.

COLOUR

The brick has a red base, with hues that vary from orange red to burgundy with blue, yellow-green and dark-purple shades. The colours shown are a near reflection of reality.

PROCESSING

Consult our **processing directions** to ensure correct and successful execution of the facade masonry.

Specific directions are available for the N70 format.

AVAILABLE SIZES

Other sizes are available on request starting from 2.000 m². Size variations may occur when blending brick types of different clay colours. Depending on the series the size may differ.

	N70/7
Available sizes	✓
Dimensions in mm	$\pm 240 \times 70 \times 70$
Pieces per m ² traditional masonry (± 12 mm)	± 48
Pieces per m ² thin-bed mortar masonry (± 6 mm)	± 54
Pieces per m ² glued masonry (± 4 mm)	± 53

Performance criteria according to PTV 23-002 (BENOR)

- Initial rate of water absorption: Normally absorbent (IW 3)
- Frost class: Very frost-proof – F2 (80°C)

TECHNICAL INFORMATION ACCORDING TO NBN EN 771-1 (CE)

- Water absorption: 14%
- The complete declaration of performance (DoP) is available at
